applications of control theory control theory describes the information one should be sensitive to and the pattern of influence that one should exert on a dynamic system in order to achieve a goal as such it is applicable to various forms of dynamic behavior the book primarily deals with manual control e g moving the cursor on a computer screen lifting an object hitting a ball driving a car both as a substantive area of study and as a useful perspective for approaching control theory it is the experience of the authors that by imagining themselves as part of a manual control system students are better able to learn numerous concepts in this field topics include varieties of control theory such as classical optimal fuzzy adaptive and learning control as well as perception and decision making in dynamic contexts the authors also discuss implications of control theory for how experiments can be conducted in the behavioral sciences in each of these areas they have provided brief essays intended to convey key concepts that enable the reader to more easily pursue additional readings behavioral scientists teaching control courses will be very interested in this book in this volume bernstein forses and outlines the development of a social theory that is at once empirical interpretive and critical a proposal for moving from price centric to innovation centric competition policy reviewing theory and evidence on economic incentives for innovation competition policy and antitrust enforcement have traditionally focused on prices rather than innovation economic theory shows the ways that price competition benefits consumers and courts antitrust agencies and economists have developed tools for the quantitative evaluation of price impacts antitrust law does not preclude interventions to encourage innovation but over time the interpretation of the laws has raised obstacles to enforcement policies for innovation in this book economist richard gilbert proposes a shift from price centric to innovation centric competition policy antitrust enforcement should be concerned with protecting incentives for innovation and preserving opportunities for dynamic rather than static competition in a high technology economy gilbert argues innovation matters gilbert considers both theory and available empirical evidence on the relationships among market structure firm behavior and the production of new products and services he reviews the distinctive features of the high tech economy and why current analytical tools used by antitrust enforcers aren t up to the task of assessing innovation concerns he considers from the perspective of innovation competition kenneth arrow s replacement effect and the schumpeterian theory of market power and appropriation discusses the effect of mergers on innovation and future price competition and reviews the empirical literature on competition mergers and innovation he describes examples of merger enforcement by us and european antitrust agencies examines cases brought against microsoft and google and discusses the risks and benefits of interoperability standards finally he offers recommendations for competition policy the open access edition of this book was made possible by generous funding from arcadia a charitable fund of lisbet rausing and peter baldwin
